

## DT-A10

### Description

The wire clamp consists of two parts: stainless steel 201 material retractor and reinforced nylon material body. When we produce nylon material, we can make material formula according to customer's tension requirements. The greater the diameter of 201 stainless steel wire, the greater the tensile force and the maximum can reach 1.5KN. Metal hook We also have special shape design to meet the different use environment of customers. The product is mainly used in FTTH butterfly cable, which has very strong tensile force and good corrosion resistance and high temperature resistance and high toughness. We will provide you with the most professional product performance support to meet your requirements

### Features

1. Strong UV protection
2. High corrosion resistance
3. Flexible tension choice of 0.5-1.5kN
4. Metal hook Available in various shapes
5. Stainless steel wire diameter and shape can be customized

### Configuration

Model	Size	Cable Diameter	Weight	Breaking Load	Cable Diameter
DT-A10	170*50*25 mm	PA6 or PA66+SS201	36 g	0.6-1.2 KN	2-5 mm
